

**Amendments to the Claims**

This listing of claims replaces all prior versions, and listings, of claims in this application.

**Listing of Claims:**

1. (Currently Amended) A ~~computer-implemented~~ method for ~~analyzing~~ illustrating an operation of an organization comprising:
  - defining ~~in a computer~~ the operation as a value chain, the value chain containing a plurality of processes;
  - associating, ~~using a computer,~~ a process of the value chain with an element that is subject to the process;
  - associating, ~~using a computer,~~ a characteristic an actor with the associated process and element; and
  - displaying ~~on a computer user interface~~ on a single display the associated ~~characteristic actor~~, process, and element as associated.
2. (Currently Amended) The method of claim 1, wherein defining the operation comprises plotting the value chain on a matrix,
  - wherein associating the process and the element comprises mapping a plurality of elements against the value chain on the matrix,
  - wherein associating the ~~characteristic~~ actor with the associated process and element comprises indicating the ~~characteristic~~ actor of the associated process and element at an intersection on the matrix corresponding to the associated process and element; and

wherein displaying comprises displaying the matrix on ~~the~~ a computer user interface.

3. (Original) The method of claim 2, wherein the plurality of elements are grouped by class, business unit, and geography of the organization.

4. (Previously Presented) The method of claim 3, wherein the class defines commonalities among a group of elements.

5. (Original) The method of claim 1, wherein the operation comprises an information technology operation, and wherein the element comprises one of a client, a server, an enabler, and an application.

6. (Currently Amended) The method of claim 1, wherein the ~~characteristic~~ actor of the associated process and element comprises an actor responsible for furnishing the associated process and element.

7. (Original) The method of claim 6, wherein the actor comprises one of the organization, an outsourcer for the organization, and a third party to the organization and the outsourcer.

8. (Original) The method of claim 7, wherein the actor is the outsourcer, and wherein the method further comprises developing a contract between the organization and the outsourcer for the outsourcer's furnishing of the associated process and element.

9. (Previously Presented) The method of claim 6, wherein the actor comprises one of a first company participating in a merger and a second company participating in the merger.

10. (Canceled)

11. (Canceled)

12. (Original) The method of claim 1, wherein the process is defined according to an industry standard.

13. (Original) The method of claim 1, wherein the plurality of processes comprises relate, develop, contact, fulfill, operate, advise, and manage.

14. (Currently Amended) A method for illustrating a scope of an outsourcing comprising:  
defining ~~in a computer~~ a value chain containing a plurality of processes;  
defining ~~in a computer~~ a collection of elements, wherein the collection of elements is subject to the plurality of processes;

associating ~~in a computer~~ a process of the plurality of processes with an element of the collection of elements;

associating ~~in a computer~~ an actor with the associated process and element, wherein the actor furnishes the associated process and element;

defining ~~in a computer~~ a the scope for the outsourcing based on the associated actor, process, and element; and

displaying the scope for the outsourcing ~~on a computer user interface~~ on a single display, wherein the ~~computer user interface~~ displayed scope graphically presents the association between the associated actor, process, and element.

15. (Previously Presented) The method of claim 14, wherein associating the process of the plurality of processes with the element of the collection of elements comprises mapping the plurality of processes against the collection of elements in a matrix, wherein associating the actor with the associated process and element comprises listing the actor at an intersection of the associated process and element within the matrix, and wherein displaying the scope comprises displaying the populated matrix.

16. (Original) The method of claim 14, wherein the outsourcing is between an organization and an outsourcer for the organization, and wherein the actor is one of the organization, the outsourcer, and a third party to the organization and the outsourcer.

17. (Previously Presented) The method of claim 14, wherein the process comprises a service measure, and the method further comprises associating a service level with the associated process and element and displaying the associated process, element, and service level on the computer user interface.

18. (Currently Amended) The method of claim 14, further comprising associating a cost with the associated process and element and displaying the associated process, element, and cost on the computer user interface.

19. (Original) The method of claim 14, wherein the plurality of processes comprises one of information technology functions, human resource functions, finance and accounting functions, procurement functions, call center functions, back-office functions, and mid-office functions.

20. (Currently Amended) A method for illustrating interactions between an organization and an outsourcer participating in an outsourcing comprising:

defining ~~in a computer~~ a value chain containing a plurality of processes;

defining ~~in the computer~~ a collection of elements, wherein the collection of elements is subject to the plurality of processes;

associating ~~in the computer~~ the plurality of processes with the collection of elements;

displaying ~~on a computer user interface~~ the associations between the plurality of processes and the collection of elements;

assigning ~~in the computer~~ actors for the associated processes and elements, wherein the actors are either ~~an~~ the organization, ~~an~~ the outsourcer for the organization, or a third party to the organization and the outsourcer;

displaying ~~on the computer user interface~~ the actors for the associated processes and elements;

identifying, along the value chain, interactions between the organization and the outsourcer;

creating interaction models for the identified interactions; and

displaying ~~on a computer user interface~~ the interaction models.

21. (Original) The method of claim 20, wherein the interaction models define a sequence by which to complete the plurality of processes and information that is to be passed between the organization and the outsourcer.

22. (Currently Amended) The method of claim 20, wherein associating the plurality of processes with the collection of elements comprises mapping the plurality of processes against the collection of elements in a matrix,

wherein assigning the actors comprises listing the actors at intersections of processes and elements in the matrix,

wherein displaying the plurality of processes and the collection of elements comprises displaying the matrix, and
